

I am

farmer

I'm trying to

i'm just trying to get  
more yield without  
wasting excess of  
WATER and POWER

But

BUT however in  
agriculture operation  
waste 60% of water  
consumed each year

Because

BECAUSE while **under watering**  
causes crop stress and yield  
reduction. In **overwatering** can  
also causes yield reduction, soil  
erosion and pesticide runoff.

Which makes me feel

which makes me to feel  
we have to save large  
amount of water and  
uses it for next sessions
